

Study programme: General Agronomy			
Type and level of study: Bachelor's degree (240 ECTS) – First cycle			
Course title: Entomology			
Lecturer: Ass. Prof. Snežana Tanasković, PhD			
Language of instruction: English			
ECTS credits: 5			
Prerequisite:			
Semester: <i>summer</i>			
Course objective			
To provide theoretical knowledge and practical skills in identifying and recognising insect damage (direct and indirect damage) from phytopathological damages, nutrient excesses and deficiencies.			
Learning outcomes			
The acquired competence in the visual diagnosis of damage in the field and storage resulting from the presence and activity of agricultural pests. Students will be able to recommend rational control measures in the chemical control of economically important insect pests. Other important outcomes include individual student capability of using professional literature, and possibilities for engagement in field, research or scientific work.			
Course contents			
<i>Theoretical instruction</i>			
General characteristic of insect pests of plants (morphological, anatomical, physiological). Growth and development. Ecology. Epidemiology. Types of interaction (competition, predation, mutualism). Insect systematics. Economically important pests in agriculture. Life cycle of agricultural pests. Insect-plant interactions in the ecosystem. Population dynamics of pests. Levels of intervention. Monitoring and sampling. Types of traps. Types of control. Insecticides. Applications of different insecticides in agricultural production.			
<i>Practical instruction</i>			
Adult, larvae and symptoms identification of economically important pests in field crops, vegetable crops, fruit crops, grapes and storage products. Basic parameters of insecticide applications, compatibility, biological efficiency, calculations of toxicological effects, design of integrated plant protection programmes.

Robinson, J. (2003): Identification guide for Lepidopteran larvae commonly encountered on imported plant material. SCL, 1-70.			
Hours of active teaching			Other classes
Lectures:	Practicals: 2x15=30	Other forms of teaching Tutorials 3x15=45	
Teaching methods			
Lectures are held in modernised classrooms using modern devices and teaching aids.			
Laboratory and practical sessions involve individual student work.			
Field work during the growing season provides practical training in trap placement, monitoring population dynamics, action thresholds and pest control measures.			
For term paper assignments, office hours are open for questions regarding the choice of topic and selection of relevant references.			
Assessment (maximum points 100)			
Examination requirements	Points	Final examination	Points
Class participation	5	oral examination	
Practical sessions/tests	15	written examination	50
Term paper assignments/homework	20	
Project	10		
Other			
Grading system			
Grade	ECTS	Description	
10	91-100	Excellent	
9	81-90	Exceptionally good	
8	71-80	Very good	
7	61-70	Good	
6	51-60	Passing	
5	≤50	Failing
